

Continuity & Risk Management an Advantage of Software Development Outsourcing

Meaning of the outsourcing is basically awarding a particular project which is mostly a part of a bigger one, to some other company instead of completing it by company itself. There is a reason why most of the companies today outsource their business or project or web application development to some external company which are more reliable and advantageous than completing every part of the project in house. Some reasons or we can say advantages are many times company have lack of expertise of that particular requirement or platform which they need to complete so they award that project to other firm which is already have all the expertise which is required as **Outsourced Software Company** already keeps people who all are specialize in required technology and must be capable enough of delivering project more fast and efficient.

Most of the firms knows that it is beneficial for them to outsource web application development instead of hiring new people in house for that platform as with the help of outsourced company they get their project done by experienced professionals as they also knows latest technology updates and Implement those updates into the project which is assigned to them within the agreed time frame.

The most important reason why companies outsource their project is the cost of development and other is to save the time and to be able to concentrate on the core business rather than investing time in the development process other benefit would be the cost which is a most major factor in deciding if outsourcing a project is a valid choice or not. There are number of application development companies which outsource their many projects. But we need to consider and check the quality of team they have with them rather than just the price of the project they are offering.

Major risks of outsourcing which have been identified are:

- Communication and cultural barriers.
- Requirements are not clear.
- Quality assurance.
- Concern about the security of intellectual property.

By recognizing the risks and where they are lacking they need to take early steps to reduce them. Before any company starts planning to work on risk reducing or minimizing. They first need to work and categories those risks that all are can become threats to business continuity and can cost money in lost opportunities. They need to list down the risk that are related with the project and after that evaluate the impact of those related risks to the business. It is

important to have a dedicated expert professional team at the offshore company site working Dedicatedly for that project start to the deployment of the project. During the process of outsourcing there many information of the company which is confidential must assure that it should be completely secure and will not be leaked further to any other firm. Hence any decisions which is important for the business should be taken after considering all the factors.
